EDUCATION

B.Tech Physics Electronics

Graduated:11/2023

Federal University of
Technology, Akure.

PROJECTS

Crypto Landing Page

- Developed a visually appealing and optimized crypto landing page for a client looking to do publicity for his token with a proactive engagement achieving 100 active users within the two weeks of deployment.
- Streamlined app performance, resulting in a 20% decrease in load times and a seamless user experience by executing **React** best practices.

Hackathon Project

- Engineered an responsive and pixel-perfect landing page for a hackathon project, following a detailed UI design in less than three days.
- Identified and addressed a blank screen issue to improve functionality and user experience, resulting in a 50% reduction in user-reported issues, by using **Axios** as the main HTTP Client.

Memory Game

- Created an interactive webapp game that made use of the concepts of states to flip cards and find their match
- Achieved a more efficient workflow by automating repetitive tasks through **SCSS** mixins. As a result, the project's development time was reduced by 20%.

CERTIFICATION & SKILLS

- Modern JavaScript From The Beginning
- Modern HTML & CSS From The Beginning (Including Sass)
- Programming Languages: HTML5, CSS3 , JavaScript
- Frameworks and libraries: ReactJS, TailwindCSS, Next.JS, Three.JS
- CSS Preprocessors: SCSS
- Tools: Git, GitHub, Firebase, Sanity.io
